Welcome to SEINet

The SEINet data portal was created to serve as a gateway to distributed data resources of interest to the environmental research community within Arizona. Through a common web interface, we offer tools to locate, access and work with a variety of data. SEINet is more than just a web site - it is a suite of data access technologies and a distributed network of collections, museums and agencies that provide environmental information.

To learn more about the features and capabilities available through this site, visit the Symbiota Help Pages. Join SEINet as a regular visitor and please send your feedback to seinetAdmin@asu.edu. Visit the Data Usage Policy page for information on how to cite data obtained from this web resource.

Visit some of the other regional data portals that are fellow members of the SEINet Network.

- Intermountain Regional Herbarium Network
- Madrean Archipelago Biodiversity Assessment (MABA)
- Midwest Herbaria
- New Mexico Biodiversity
- North American Network of Small Herbaria
- North Great Plains Herbaria
- SERNEC (Southeast USA)

 Development of SEINet, Symbiota, and several of the specimen databases have been supported by National Science Foundation Grants (DBI 9983132, BRC 0237418, DBI 0743827, DBI 0847966)

SEINet?

- Southwest Environmental Biodiversity Information Network

The screenshot shows the SEINet Arizona Chapter website. At the top, there is a browser window with the URL swbiodiversity.org/seinet/index.php. Below the browser window is a banner image of a desert canyon with the text "SEINet Arizona Chapter" in large white letters. A navigation menu includes links for Home, Search, Images, Games, Links, Flora Projects, Agency Floras, and Dynamic Floras. On the right side of the menu, there are links for Log In, New Account, and Sitemap. The main content area features a "Welcome to SEINet" heading and a "Taxon Search" box with a search input field and a "Search" button. Below the search box, there is a paragraph of text: "To learn more about the features and capabilities available through this site, visit the Symbiota Help Pages. Join SEINet as a regular visitor and please send your feedback to seinetAdmin@asu.edu. Visit the Data Usage Policy page for information on how to cite data obtained from this web resource." This is followed by another paragraph: "Visit some of the other regional data portals that are fellow members of the SEINet Network." Below this is a bulleted list of regional data portals: Intermountain Regional Herbarium Network, Madrean Archipelago Biodiversity Assessment (MABA), Midwest Herbaria, New Mexico Biodiversity, North American Network of Small Herbaria, North Great Plains Herbaria, and SERNEC (Southeast USA). To the right of the list is a photograph of a red, tubular flower with a green, spiky calyx. Below the photograph is the text "What is this plant?" and a link "Click here to test your knowledge". At the bottom of the page, there is a logo for the National Science Foundation (NSF) and a paragraph of text: "Development of SEINet, Symbiota, and several of the specimen databases have been supported by National Science Foundation Grants (DBI 9983132, BRC 0237418, DBI 0743827, DBI 0847966)".

[Flora of North America](#)
[VPAP Treatment](#)
[vPlants](#)

Alan T. Whittemore in Flora of North America (vol. 3)

Shrubs, evergreen, 0.02-0.2(-0.6) m. Stems monomorphic, usually without short axillary shoots. Bark of 2d-year stems grayish or purplish brown, glabrous. Bud scales 3-8 mm, deciduous. Spines absent. Leaves (3-)5-7-foliate; petioles (1-)3-9 cm. Leaflet blades thin and flexible; surfaces abaxially dull, papillose, adaxially dull, rarely glossy, somewhat glaucous; terminal leaflet stalked, blade 3.2-9.5 × 2.3-6 cm, 1.2-2.2(-2.5) times as long as wide; lateral leaflets ovate or elliptic, 1(-3)-veined from base, base rounded to obtuse or truncate, margins plane, toothed, with 6-24 teeth 0.5-3 mm tipped with spines to 0.6-2.8 × 0.1-0.25 mm, apex rounded, rarely obtuse or even broadly acute. Inflorescences racemose, dense, 25-50-flowered, 3-10 cm; bracteoles membranous, apex rounded to obtuse or broadly acute. Anther filaments with distal pair of recurved lateral teeth. Berries blue, glaucous, oblong-ovoid, 6-10 mm, juicy, solid. 2n = 28. Flowering spring (Apr-Jun). Open forest, shrubland, and grassland; 200-3000 m; Alta., B.C.; Ariz., Calif., Colo., Idaho, Minn., Mont., Nebr., Nev., N.Mex., N.Dak., Oreg., S.Dak., Tex., Utah, Wash., Wyo. *Berberis sonnei* was described based on plants with relatively narrow, rather shiny leaflets collected by Sonne in Truckee, California. Subsequent collections from this population show the morphology typical of *B. repens*; Sonne's collections evidently are an aberrant form of this species. *Berberis repens* is resistant to infection by *Puccinia*

Pan, zoom and click on map to capture coordinates, then submit coordinates to build a species list. If a radius is defined, species lists are generated using data of specimens collected within the defined area. If a radius is supplied, the area is sampled in concentric rings until the sample size is determined to best represent the local species diversity. In other words, poorly collected areas will have a larger radius sampled. Setting the taxon filter will limit the return to species found within that taxonomic group. [Less Details](#)

Flora of North America

Leila M. Shultz in Flora of North America (vol. 19, 20 and 21)

Biennials or perennials, 30-100 cm, faintly aromatic (rhizomatous). **Stems** 1-3, erect, reddish brown, simple (leafy), glabrous or glabrate. **Leaves** basal (in rosettes, petiolate) and cauline, bicolor (white and green); blades ovate, 3-7(-20) × 2-4(-6) cm, 2-3-pinnately-lobed (lobes elliptic, 2-6 mm wide; cauline sessile, smaller), faces tomentose (abaxial) or glabrous or glabrescent (adaxial), glandular. **Heads** (nodding, peduncles 0 or 2) in paniculiform to racemiform arrays 10-35 × 2-4 cm (often 1-sided). **Involucres** broadly ovate, 3-5 × 4-5(-6) mm. **Phyllaries** broadly ovate, sparsely hairy. **Florets**: pistillate 4-5(-13), (1-1.5 mm); bisexual 25-35; corollas yellow, 1.5-2 mm, glabrous. **Cypselae** elliptic, 0.5-0.8 mm, glabrous. Flowering late summer-early fall. Open coniferous forests, mid to upper montane; 2200-3100 m; Ariz., Colo., N.Mex.; Mexico (Chihuahua).

Intermountain Region Herbarium Network

The screenshot shows a web browser window with the URL intermountainbiota.org/portal/index.php. The browser's address bar and tabs are visible at the top. Below the browser window is the website's header, which features a banner image of orange flowers on the left and the text "Intermountain Region Herbarium Network" in large, bold, white letters on a dark green background.

On the left side of the page is a navigation menu with the following items:

A hand cursor icon is positioned over the "Colora" link. The main content area on the right begins with a red heading: "Welcome to Intermountain Regional Herbarium Network". Below this heading is a paragraph of text:

The Intermountain Region is basically the region between the Sierra Nevada and the Rocky Mountains but the precise interpretation of the phrase varies. Most agree that the hydrologic Great Basin, the area with no external drainage, dominates the region. This basin is divided by several north-south trending mountain ranges that are separated by wide valleys. The mountain ranges support woods and forests that are now essentially isolated from each other as well as from the Sierra Nevada and Rocky Mountains by the intervening valleys. The region's biota is determined in large part by its variable and scant precipitation, most of which falls in winter, and its large fluctuations in temperature, both daily and seasonal.

Below the text is a section titled "Plant of the Day" with a photograph of a plant with small, pink, tubular flowers. Underneath the photo is the text "What is this plant?" followed by a link: "Click here to test your knowledge".
